Acertara Acoustic Laboratories Introduces AmpSafe™ Ultrasound Leakage Tester and the Accept™ Omni-Connector

Acertara Acoustic Laboratories, an ISO17025:2005 accredited and ISO9001:2008 and ISO13485:2003 certified ultrasound facility announces the introduction of its newest products; AmpSafe™, an electrical leakage analyzer for ultrasound transducers and Accept™, a probe adapter used with AmpSafe™ and other electrical leakage analyzers that interfaces with multiple styles of transducer connectors.

AmpSafe™ is the first electrical leakage tester to incorporate a USB interface to connect to a PC for complete test report generation. The test report on AmpSafe™ will include detailed probe information, measurement values, tester identification, and the date to match with the upcoming Intersocietal Accreditation Commission guidelines. AmpSafe™ will be offered with a compact electrode designed to work with automated TEE disinfection stations like the CS Medical TD-100™.

The new patent pending Accept™ allows users to connect a single adapter to the AmpSafe™ tester by utilizing an expandable interface platform eliminating the user need to connect/disconnect multiple adapters during testing. The Acertara R&D team also included electrical shock hazard prevention through Accept's unique twist design.

Speaking about AmpSafe™ and Accept™, G. Wayne Moore, President and CEO of Acertara said; *"AmpSafe™ and Accept™ allow service personnel and care-givers to step into the digital age of electrical leakage testing. Our R&D team at Acertara leveraged years of experience in engineering technologically advanced test devices to develop a modern electrical leakage suite that focuses not only on patient safety but user safety with reporting capabilities to comply with leakage testing requirements. Combined with Aureon™, Active-Z™, and Advantage™, our customers now have access to a comprehensive ultrasound test suite to provide optimal patient care and safety."*

About Acertara Acoustic Laboratories

Acertara Acoustic Laboratories, 1860 Lefthand Circle, Suite H, Longmont, Colorado 80501 is an ISO/IEC 17025:2005 accredited acoustic measurement laboratory and ISO9001:2008 and ISO13485:2003 ultrasound facility providing acoustic power testing services to ultrasound OEMs and regulatory bodies around the world, new product development, and advanced probe repair. Additional information about Acertara can be found on its Website at www.acertaralabs.com. You may also contact Dave Dallaire immediately at daved@acertaralabs.com or by phone at 303.834.8413.
